Also, you can learn how to use Stable Diffusion, Automatic1111 SD Web UI and do LoRA and DreamBooth trainings on SD 1.5 and SDXL models from SECourses YouTube channel.

Full tutorials on > <https://www.youtube.com/SECourses>

I did SDXL DreamBooth training with a medium quality dataset to generate these images. Best configuration posted on this post and hopefully a full tutorial coming soon for this. I have done 66+ full SDXL DreamBooth training to find out best hyper parameters and configuration.

Config file and training command > <https://www.patreon.com/posts/very-best-for-of-89213064>

I will be constantly updating this file. I am currently testing 4500 artist styles and as I progress them, I will update this file and the Patreon Post. So, stay subscribed and tuned.

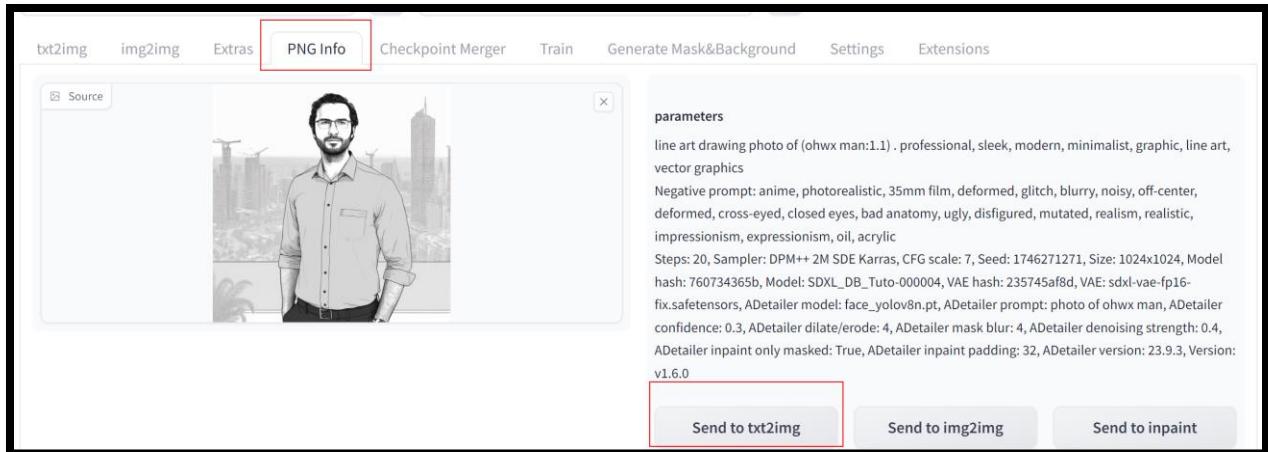

In my prompts `ohwx` will be the **rare token** and `man` is the **class token**.

So, if you have done your training with different tokens don't forget to change prompts according to your tokens.

You can download the images and use them in PNG info to quickly send into txt2images tab or entire prompt. Click download links under each prompt attached image to download them.

Moreover, you can use these images as a reference in ControlNet like canny, depth and more.

Finally, these prompts are tested on SDXL. However, they should work on SD 1.5 models as well. Only some changes may be necessary such as reducing prompt power of some prompts. E.g., instead of (urban backdrop:1.4) > (urban backdrop:1.1) for SD 1.5 models. Test them.

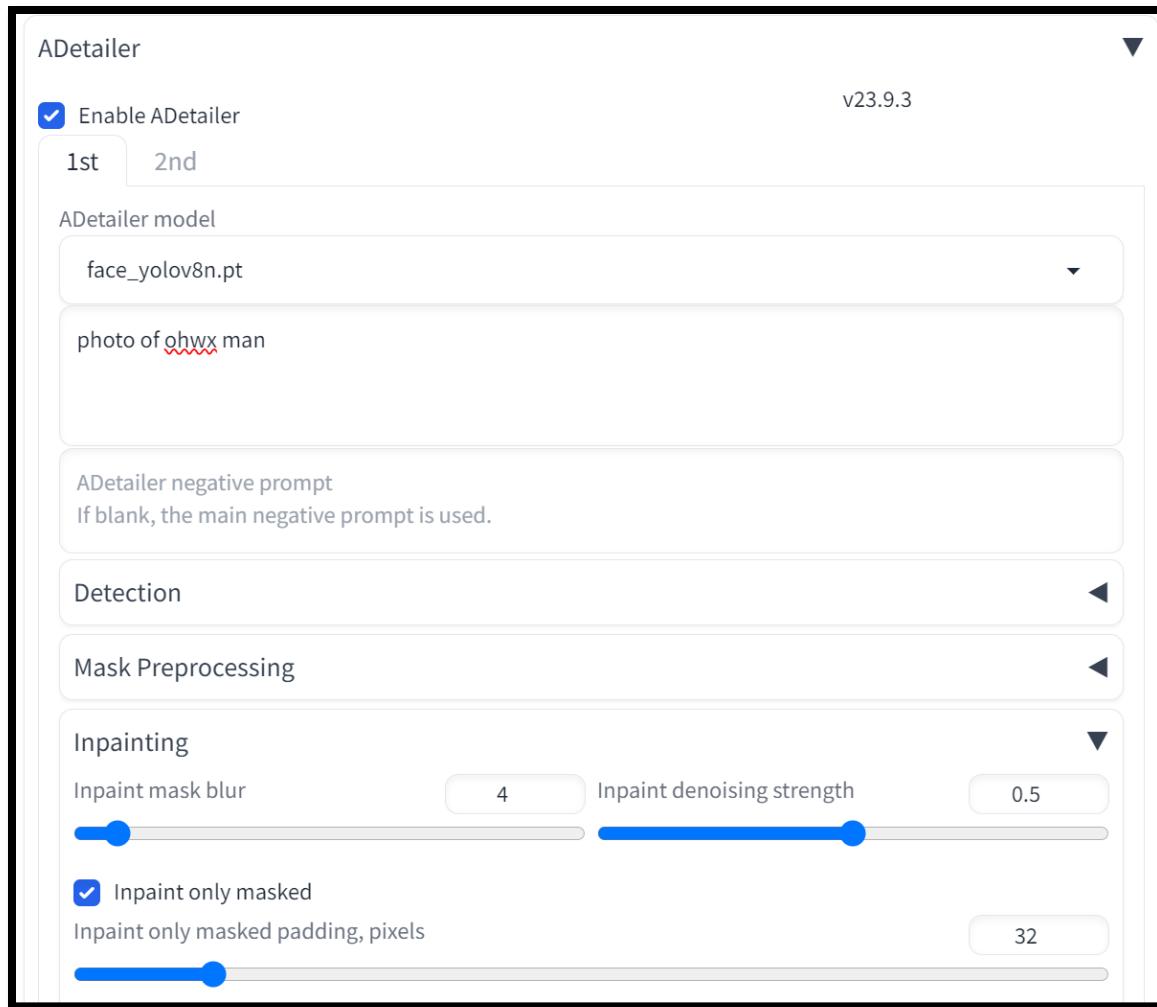

In some prompts using After Detailer (ADetailer) extension or afterwards face inpainting is necessary. However how to use ADetailer will make huge effect.

<input checked="" type="checkbox"/> adetailer	https://github.com/Bing-su/adetailer.git	main	910bf3b9	2023-09-19 18:35:27	unknown
---	---	------	----------	---------------------	---------

Here some samples so you will understand better.

Usually, I prefer to change prompt of ADetailer to photo of ohwx man

The rest of the settings are default as below

However when you make like this it will make stylized images faces realistic which will break the image.

So what to do in this case?

1. Try to reduce inpaint denoising strength such as 0.4 or 0.3
2. If this fails try to add styling prompts to the custom prompt box
3. If this also fails delete prompt entirely from ADetailer custom prompt box
4. If this also fails not much else to do

Here some comparison

Positive Prompt

- comic photo of (ohwx man:1.1) . graphic illustration, comic art, graphic novel art, vibrant, highly detailed

Negative Prompt

- photograph, deformed, glitch, noisy, realistic, stock photo

The raw output is vs after ADetailer enabled with above settings

PROMPTS

First prompt is positive and second prompt is negative.

You can download images and use in PNG info tab of Automatic1111 Web UI if you wish.

1. High-resolution, full-body photograph of an (ohwx man:1.1) suitable for a popular Instagram post. (Fashion-forward:1.3), (urban backdrop:1.4), capturing the contemporary and vibrant energy of Instagram's aesthetics
 - a. drawing,painting,crayon,sketch,graphite,impressionist,noisy,blurry,soft,deformed,ugly
